COURSE SYLLABUS
CMPT 364: AUTOMATA AND FORMAL LANGUAGES

Catalogue Description
Introduces the foundations of Computer Science. The theory of computation is explored through automata and formal languages. In particular, finite automata, grammars, Turing Machines and applications to Computer Science such as dynamic modelling, computer architecture, lexical analysis and parsing are studied.

Prerequisite(s): CMPT 260 and 6 credit units in 200-level MATH or STAT.
Class Time and Location: Monday, Wednesday, Friday, 9:30am - 10:20am, Thorvaldson Building 205a.
Website: https://moodle.cs.usask.ca/moodle/course/view.php?id=88
Course announcements regarding assignments and examinations as well as lists of frequently asked questions and other information may and will be communicated to the class via this website. The student is responsible for reading this website regularly.

Instructor Information
Instructor: Ian McQuillan
Contact: Email: mcquillan@cs.usask.ca,
            Phone: (306) 966-2900
            Location: Thorvaldson Building (Spinks) S423.

Course Objectives
The course objectives are as follows:

- to better understand the mathematical foundations of computer science,
- to gain experience with mathematical proofs generally,
- to understand the relationships between proofs and algorithms, and proofs of correctness of algorithms,
- to understand the notion of nondeterminism, and how it relates to determinism and computers,
- to understand the topics of regular languages, deterministic finite automata, nondeterministic finite automata, regular expressions, context-free grammars, pushdown automata, Turing Machines, undecidability and other grammars,
- to gain an appreciation for applications of formal languages and automata.

Student Evaluation

</tbody>
</table>

The assignments will be due Fridays during class.
- Assignment 1: January 24, 2013
• Assignment 2: February 7, 2013
• Assignment 3: March 7, 2013
• Assignment 4: March 21, 2013
• Assignment 5: April 4, 2013

The Midterm will be held the week of Feb. 10, 2013 (Tentative). The exact date will be announced during class and on the class website.

Final Exam Scheduling

The Registrar schedules all final examinations, including deferred and supplemental examinations. Students are advised not to make travel arrangements for the exam period until the official exam schedule has been posted.

Note: All students must be properly registered in order to attend lectures and receive credit for this course.

Textbook Information

Required Text

Lecture notes will be provided online via the course website, however, lecture notes are not a substitute for attending class. Additional material and specific examples of concepts that are not present in the online lecture notes will be presented in class and only in class, thus, class attendance is essential to be successful in this course.

<tr>
<td></td>
<td>• Proof by construction, contradiction, induction</td>
</tr>
</tbody>
</table>
### Regular Languages
- Deterministic finite automaton
  - Definition
  - Examples of DFA’s and languages
  - Construction of a DFA from a computer program
  - Languages and automata versus inputs and algorithms
  - Applications: dynamic modelling, computer architecture, string matching
- Nondeterministic finite automaton
  - Definition
  - Why silicon computers are not nondeterministic
  - Equivalence of languages accepted by nondeterministic finite automata to deterministic
  - -NFAs and equivalence to NFAs
- Regular expressions
  - Definitions
  - Regular expression equivalence to finite automata
  - Applications: pattern matching, lexical analysis
- Non-regular languages and the pumping lemma

### Context-free Languages
- Grammars and generators versus acceptors
- History of grammars, natural languages, programming languages
- Context-free grammars
- Applications to parsing, markup, XML
- Pushdown automata
- Equivalence of pushdown automata to context-free grammars
- Pumping Lemma

### Turing Machines
- Deterministic turing machines
  - Definition
  - Examples
  - Turing machines as programs
  - Storage variants and equivalence
- Random access machines and equivalence of Turing Machines to random access machines
- Church-Turing Thesis and the universe
- Nondeterministic Turing Machines
- Brief introduction to undecidable problems

### Grammars
- Restrictions on type-0 grammars, context-sensitive, context-free and regular grammars and their equivalence to automata models.
Policies

Late Assignments
Extensions on assignments will be granted only by the course instructor. As a general rule, individual requests for extensions on medical or compassionate grounds will only be considered if made prior to the due date of the assignment. All extension requests will require suitable documentation.

Missed Examinations
1. "Students who have missed an exam or assignment must contact their instructor as soon as possible. Arrangements to make up the exam may be arranged with the instructor. Missed exams throughout the year are left up to the discretion of the instructor if a student may make up the exam or write at a different time. If a student knows prior to the exam that she/he will not be able to attend, they should let the instructor know before the exam."

2. "Final exams - a student who is absent from a final examination through no fault of his or her own, for medical or other valid reasons, may apply to the College of Arts and Science Dean’s office. The application must be made within three days of the missed examination along with supporting documentary evidence. Deferred exams are written during the February mid-term break for Term 1 courses and in early June for Term 2 and full year courses."

Incomplete Course Work and Final Grades
When a student has not completed the required course work, which includes any assignment or examination including the final examination, by the time of submission of the final grades, they may be granted an extension to permit completion of an assignment, or granted a deferred examination in the case of absence from a final examination. Extensions for the completion of assignments must be approved by the Department Head, or Dean in non-departmentalized Colleges, and may exceed thirty days only in unusual circumstances. The student must apply to the instructor for such an extension and furnish satisfactory reasons for the deficiency. Deferred final examinations are granted as per College policy.

In the interim, the instructor will submit a computed percentile grade for the course which factors in the incomplete course work as a zero, along with a grade comment of INF (Incomplete Failure) if a failing grade. In the case where the instructor has indicated in the course outline that failure to complete the required course work will result in failure in the course, and the student has a computed passing percentile grade, a final grade of 49% will be submitted along with a grade comment of INF (Incomplete Failure).

If an extension is granted and the required assignment is submitted within the allotted time, or if a deferred examination is granted and written in the case of absence from the final examination, the instructor will submit a revised computed final percentage grade. The grade change will replace the previous grade and any grade comment of INF (Incomplete Failure) will be removed. For provisions governing examinations and grading, students are referred to the University Council Regulations on Examinations subsection of the Calendar.

(2011 University of Saskatchewan Calendar/Academic Courses Policy)

Academic Honesty
The University of Saskatchewan is committed to the highest standards of academic integrity and honesty. Students are expected to be familiar with these standards regarding academic honesty and to uphold the policies of the University in this respect. Students are particularly urged to familiarize themselves with the provisions of the Student Conduct & Appeals subsection of the University Secretary Website and avoid any behaviour that could potentially result in suspensions of cheating, plagiarism, misrepresentation of facts and/or participation in an offence. Academic dishonesty is a serious offence and can result in suspension or expulsion from the University.

All students should read and be familiar with the Regulations on Academic Student Misconduct, http://www.usask.ca/university_secretary/honesty/StudentAcademicMisconduct.pdf,
as well as the Standard of Student Conduct in Non-Academic Matters and Procedures for Resolution of Complaints and Appeals,  

Academic honesty is also defined and described in the Department of Computer Science Statement on Academic Honesty:  

For more information on what academic integrity means for students see the Student Conduct & Appeals subsection of the University Secretary Website at:  

Examinations with Disability Services for Students (DSS)

Students who have disabilities (learning, medical, physical, or mental health) are strongly encouraged to register with Disability Services for Students (DSS) if they have not already done so. Students who suspect they may have disabilities should contact DSS for advice and referrals. In order to access DSS programs and supports, students must follow DSS policy and procedures. For more information, check http://www.students.usask.ca/disability/, or contact DSS at 966-7273 or dss@usask.ca.

Students registered with DSS may request alternative arrangements for mid-term and final examinations. Students must arrange such accommodations through DSS by the stated deadlines. Instructors shall provide the examinations for students who are being accommodated by the deadlines established by DSS.
