

Welcome to the

University of Saskatchewan - Department of Computer Science

CMPT 355 - Theory and Application of Data Bases

Web site for 2014

Class notes can be accessed by registered students via: moodle.cs.usask.ca

[Class News](#): (Last Updated: Aug.14) [Welcome]

Course Syllabus CMPT 355

Catalog Description:

Lectures, assignments and projects dealing with the management, storage, and retrieval of large volumes of data. Concentrates on the relational data model, and relational data base management systems. Topics include: recovery and concurrency, integrity and security, query optimization, normalization, and semantic modeling. Additional topics include multimedia databases and other paradigms.

Prerequisites:

CMPT 270 and 260 [Please note: these prerequisites **will not be waived** for undergraduates without major industrial database experience]

Lectures: Monday, Wednesday, and Friday from 11:30 to 12:20

(see [Class Schedule](#) below)

The lectures will answer student questions and summarize / discuss / illustrate a selection of major points taken from the text. Given the amount of time available in lectures for each chapter it will not be possible to deal with every aspect of every chapter. It is required that students read the assigned portions of the text prior to the class for which they are assigned. Students are strongly encouraged to identify questions they need answered during their reading of the text.

Tutorials: Thursday at 4:00 - 5:20 in Thorv S320

PLEASE NOTE: **The first tutorial will be Thursday, Sept. 11. Students should not miss this tutorial.**

Software and Lab:

The lectures and exams focus on standard SQL. Students will be using the PostgreSQL data management system for all assignments and their project. has various differences from standard SQL.

- The text covers most of the SQL commands that we will need, but each particular database management system has its own peculiarities.
- PostgreSQL is not explicitly covered in the text and which will not be covered in the lectures.
- The tutorials will deal with the specific software that is to be used for the assignments and the project. Students are required to attend tutorials.

Individual accounts will be established on the Department of Computer Science PostgreSQL server. You must have your completed assignments/project in your account for them to be marked. However this can be accomplished by using text files that have been developed and tested on your own system.

You can load and use a copy of PostgreSQL on your own home Windows or Linux system. Cygwin <<http://sources.redhat.com/cygwin>> is a Linux emulator for Windows that optionally includes a copy of PostgreSQL.

A good source for on-line information on PostgreSQL is <<http://www.postgresql.org/docs/9.3/interactive/index.html>> .

Students are expected to use dbvisualizer as a tool to interact with PostgreSQL. It is available on the Computer Science Lab on both the Windows and Linux platforms and can be loaded to your own system from <<http://www.dbvis.com/>>.

The installation and initial use of both PostgreSQL and dbvisualizer will be discussed in the first tutorial on **Thurs. Sept. 12.**

Class Website: moodle.cs.usask.ca

Instructor:

[Jim Carter <carter@cs.usask.ca>](mailto:carter@cs.usask.ca) 280.3 Thorvaldson Bldg, 966-4893.

Office hours: Mon/Weds/Fri 12:30 - 1:20 or by appointment.

Course Objectives

A student successfully completing this course shall be able:

1. To identify the important characteristics of data and information that need to be served by a well structured database
2. To apply databases to meeting the differing needs of various users
3. To apply sql-type databases to the storage and retrieval of data
4. To apply entity-relationship diagrams to the design of well structured databases
5. To apply normalization and the concepts of relational databases to the design of well structured databases
6. To apply concepts of temporal data to the design of well structured databases
7. To apply constraints and triggers to maintain the integrity of data within a database

8. To successfully combine data and databases into a single database that better serves the combined interests involved
9. To have an understanding of selected additional advanced concepts relating to databases

Student Evaluation:

Marking Component	Marking Weight
Assignments	
A#1	05%
A#2	05%
A#3	05%
Project	
Part 1 - report	10%
Part 2 - report	10%
Demonstration	10%
Midterm	20%
Final	35%

Assignments and Project:

- Students are required to complete a series of individual assignments and a team project.
- Each assignment builds on the previous assignment. Thus, later assignments will involve fixing the previous assignments before adding new work. The project will then build upon the projects of a number of students.
- Assignments must be submitted via the Moodle system. Assignments are due at 11:00 a.m. on the day specified.
- **There will be no marks given for late assignments.**

Attendance Expectations

It is expected that students will attend and participate in all lectures and tutorials. Students will be responsible for all material presented in the lectures.

Final Exam Scheduling

The Registrar schedules all final examinations, including deferred and supplemental examinations. Students are advised not to make travel arrangements for the exam period until the exam schedule has been posted.

Note: All students must be properly registered in order to attend lectures and receive credit for this course.

Text:

Connolly and Begg, **Database Systems**, 6th Edition, 2015, Pearson

NOTE: The 5th edition is very close in content and will be sufficient for this class.

Lecture and Assignment Schedule for Fall 2014

[ALL DATES AND TOPICS SUBJECT TO CHANGE]

	Topics	Assignments	Text chapters
Sept 3 Sept 5	Introduction to CMPT 355 Introduction to Databases	A#0 Assigned - Due before Sept 22	Ch 1
Sept 8 Sept 10 Sept 12	The Database Environment The Relational Model SQL Single Table Queries		Ch 2 Ch 4 Ch 6.2 - 6.3.6
Sept 15 Sept 17 Sept 19	SQL Multi-Table Queries SQL Updates & SQL Standards Discussion of Assignment #1 SQL Data Types and Constraints	A#1 Assigned - Due Oct 1	Ch 6.3.7 Ch 6.3.8 - 6.3.10 Ch 7.1 - 7.2
Sept 22 Sept 24 Sept 26	SQL Tables and Views SQL Transactions and Access Control SQL Example SQL Example (cont.)	A#0 Due before Sept 22	Ch 7.3 - 7.6 Ch 7.5 - 7.6 --- ---
Sept 29 Oct 1 Oct 3	Entity-Relationship Modeling Enhanced Entity-Relationship Modeling Discussion of Assignment #2	A#1 Due - Oct 1 A#2 Assigned - Due Oct 15	Ch 12 Ch 13 ---
Oct 6 Oct 8 Oct 10	Advanced SQL Advanced SQL (applied in Postgres) Advanced SQL Example		Ch 8 --- ---
Oct 13 Oct 15 Oct 17	- Thanksgiving Day - no class today- E-R Example E-R Example (cont) Discussing Assignment #3	A#2 Due - Oct 15 A#3 Assigned - Due Oct 29	--- --- --- ---
Oct 20 Oct 22 Oct 24	Normalization Discussion of a previous year's midterm Midterm Exam		Ch 14 - 15 --- ---

Oct 27	Database Design Methodology & Temporal		Ch 16-19
Oct 29	Database	A#3 Due - Oct 30	---
Oct 31	Temporal Example	Project Assigned	---
	Issues in Combining Databases	Part 1 Due Nov 18	---
	Project Teams announced	Part 2 & Demo Due 8:00 am Dec 1	
Nov 3	Return midterm / Discuss class project		---
Nov 5	requirements		---
Nov 7	Issues in Combining Databases (cont)		---
	Issues in Combining Databases (cont)		
Nov 10	- University closed - Fall Mid-Term Break		
Nov 12			
Nov 14			
Nov 18	Security & Privacy	Project Part 1 Due Nov 18	Ch 20
	Transaction Management		Ch 22
Nov 20	Object-Oriented DBMSs		Ch 27-28
Nov 22			
Nov 24	Data Warehousing		Ch 31-32
	OLAP		Ch 33
Nov 26	Data Mining		Ch 34
Nov 28			
Dec 1	class project presentations - no class today	Project Due 8:00 am Nov 28	
Dec 3	class project presentations - no class today		
Dec 5	class wrap-up		

Policies in this Class

Late Assignments

Late assignments will receive 0 marks. Students with a sufficiently serious reason for being late with an assignment that is acceptable to the instructor may be allowed an extension. The instructor **will not** accept notes from Student Health Services as support for the student's reason for being late with an assignment.

Missed Assignments

1. Each assignment builds on the previous assignment, thus any missed assignment will have to be completed as a basis for completing following assignments and the class project. However, this completion will not result in any marks being awarded for the missed assignment.

2. All students are required to complete all assignments as a prerequisite to being placed into a class project team. Any student who does not complete Assignment 3 will receive a mark of 0 on the class project.

Missed Examinations

1. "Students who have missed an exam or assignment must contact their instructor as soon as possible. Arrangements to make up the exam may be arranged with the instructor. Missed exams throughout the year are left up to the discretion of the instructor if a student may make up the exam or write at a different time. If a student knows prior to the exam that she/he will not be able to attend, they should let the instructor know before the exam."
2. "Final exams - a student who is absent from a final examination through no fault of his or her own, for medical or other valid reasons, may apply to the College of Arts and Science Dean's office. The application must be made within three days of the missed examination along with supporting documentary evidence. Deferred exams are written during the February mid-term break for Term 1 courses and in early June for Term 2 and full year courses." (2007/08. <http://www.arts.usask.ca/students/transition/tips.php>)

General Policies

Incomplete Course Work and Final Grades

"When a student has not completed the required course work, which includes any assignment or examination including the final examination, by the time of submission of the final grades, they may be granted an extension to permit completion of an assignment, or granted a deferred examination in the case of absence from a final examination. The student must apply to the instructor for such an extension and furnish satisfactory reasons for the deficiency. Deferred final examinations are granted as per College policy."

In the interim, the instructor will submit a computed percentile grade for the course which factors in the incomplete course work as a zero, along with a grade comment of INF (Incomplete Failure) if a failing grade.

If an extension is granted and the required assignment is submitted within the allotted time, or if a deferred examination is granted and written in the case of absence from the final examination, the instructor will submit a revised computed final percentage grade. The grade change will replace the previous grade and any grade comment of INF (Incomplete Failure) will be removed.

For provisions governing examinations and grading, students are referred to the University Council Regulations on Examinations section of the Calendar.

(2011 University of Saskatchewan Calendar/Academic Courses Policy)

Academic Honesty

The University of Saskatchewan is committed to the highest standards of academic integrity and honesty. Students are expected to be familiar with these standards regarding academic honesty and to uphold the policies of the University in this respect. Students are particularly urged to familiarize themselves with the provisions of the Student Conduct & Appeals section of the University Secretary Website and avoid any behavior that could

potentially result in suspicions of cheating, plagiarism, misrepresentation of facts and/or participation in an offence. Academic dishonesty is a serious offence and can result in suspension or expulsion from the University.

All students should read and be familiar with the Regulations on Academic Student Misconduct (<http://www.usask.ca/secretariat/student-conduct-appeals/StudentAcademicMisconduct.pdf>) as well as the Standard of Student Conduct in

Non-Academic Matters and Procedures for Resolution of Complaints and Appeals (<http://www.usask.ca/secretariat/student-conduct-appeals/StudentNon-AcademicMisconduct.pdf>)

Academic honesty is also defined and described in the Department of Computer Science Statement on Academic Honesty (<http://www.cs.usask.ca/undergrad/honesty.php>).

For more information on what academic integrity means for students see the Student Conduct & Appeals section of the University Secretary Website at: <http://www.usask.ca/secretariat/student-conduct-appeals/forms/IntegrityDefined.pdf>

Examinations with Disability Services for Students (DSS)

Students who have disabilities (learning, medical, physical, or mental health) are strongly encouraged to register with Disability Services for Students (DSS) if they have not already done so. Students who suspect they may have disabilities should contact DSS for advice and referrals. In order to access DSS programs and supports, students must follow DSS policy and procedures. For more information, check <http://www.students.usask.ca/disability/>, or contact DSS at 966-7273 or dss@usask.ca.

Students registered with DSS may request alternative arrangements for mid-term and final examinations. Students must arrange such accommodations through DSS by the stated deadlines. Instructors shall provide the examinations for students who are being accommodated by the deadlines established by DSS.

Recording of Lectures

The instructor will not be recording lectures and will not provide approval to record lectures except if such recording is authorized by DSS.

Date of last revision: Aug. 20, 2014
